## **beldam lascar condenser rings**

Pre-formed **beldam lascar condenser rings** simplify the arduous task of packing hundreds of condenser tubes with a consequent saving of time, labour and money.

**beldam lascar condenser rings** are manufactured from anti-friction metal foil in combination with special fibre rings. The latter precludes the extrusion of the foil from the annular spaces between the condenser tubes and back plate. As the rings are constructed in single units, there is no possibility of incorrect assembly.

**beldam lascar condenser rings** are designed to withstand the action of feed additives and they will not be disturbed by the expansion and contraction of the tubes that takes place under temperature variations. The metal bond achieved between tube and tube plate eliminates electrolytic action.

Special tools are available for inserting and removing the rings and these can be supplied, if required.

**beldam lascar condenser rings** are recommended for marine and industrial condenser installations and for similar forms of heat exchangers.

Sizes for Tube Diameters	1/2"	5/8"	3/4"	1"
Ring Length	1/2"			
Supplied	10 per set			

Also in other sizes to request, giving full details in respect of size, equipment for which required, number of tubes, special features of application and enclosing drawing, if possible.
