beldam lascar drake packing

Description

Drake is a laminated packing made from the finest woven cotton duck, fractioned with a special white rubber compound. During manufacture the packing is vulcanised under controlled high pressure conditions, a process that results in a material of uniformly high strength and resilience with the advantage of low absorption and minimum swell. **Drake** possesses excellent slow ageing properties.

This packing is available either with the standard cure, which is suitable for most applications, specify **Drake**, or with a rockhard finish for special applications, specify **Drake Rockhard**.

Service

Drake is suitable for use with cold and hot water up to 140°C (280°F) and for oils and petroleum products. Recommended for use on reciprocating pump buckets and certain difficult hydraulic glands.

Drake Rockhard is a packing of similar construction to **Drake** but incorporating a special **Lascar** mix resulting in a rockhard finish. Recommended for temperatures up to 140°C (280°F).

Supplied

From 6.5mm 75mm in 1.5mm steps; square section; 6.5mm to 10mm in flat coils, in boxes of 7.5m; 11mm and over in flat coils, in boxes of 3.75m.

Also in sets of moulded split rings in all sizes.
