beldam glascar metallic proofed joints

beldam glascar metallic proofed joints are manufactured from glass yarns which have a brass wire reinforcement. The yarns are woven into a cloth and proofed with a special rubber compound. The metallic glass cloth is then folded into **beldam glascar metallic proofed joints** manually and finally subjected to a special vulcanisation process in order to give the added strength necessary to meet the exacting conditions of service on modern boilers and other high duty equipment.

beldam glascar metallic proofed joints are suitable for use against steam, air, alkalis, water, some solvents and many non aggressive chemicals on boilers, stills, autoclave units and various other plant.

beldam glascar metallic proofed joints are now being used successfully as a replacement for asbestos boiler door joints in many industries.

Maximum Temperature	250°C
Maximum Pressure	25 bar

N.B. it is not to be implied that the maximum temperature and pressure can be used simultaneously

beldam glascar metallic proofed joints are available in all standard sizes of manhole and handhole door joints and can be made to order in other special sizes to customers specifications.
