beldam lascaroil reinforced jointing RP3165

Description

Beldam Lascaroil RP3165 Rubber is a synthetic rubber jointing with a polyester scrim reinforcement, produced primarily for use with oils, but which has also proved excellent in service with many solvents and mild acids. It is tough yet resilient and will not harden or crack in service resisting any tendency to squeeze out of the joint under compression.

In standard form the jointing is supplied at 65° shore hardness, but can be manufactured in hardness from 40° - 85° shore.

Service

Beldam Lascaroil RP3165 Rubber, designed for use with hot and cold oils, is equally suitable for gasoline, solvents, aromatic solvents and alkali solutions. In some cases it may be used for temperatures up to 150°C (300°F).

Supplied

Standard size sheets 185cm by 100cm, rolls 100cm wide, strip or cut joints. In thickness from 0.75mm and up.
