beldam lascartan leather

beldam lascartan leather is for use with hydraulic machinery and pneumatic equipment and we make a wide range of types and sizes to suit differing applications.

beldam lascartan leather is manufactured from selected butts. Considerable care is taken with the tanning and dressing processes before moulding to ensure that the finished leather will give the best possible service.

beldam lascartan leather is supplied in Ram, V, U, Hat, Bucket or Cup form. When ordering, please give full details of exact sizes required and operating conditions, so that the correct grade of leather can be selected to suit varying air, water and hydraulic pressures.

In addition to hydraulic leathers, we can also supply, against specific requirements, leather hosing, straps, gloves, moulded and fabricated bellows, seals and bends.
