beldam lascar metimpel packing

Description & Service

Metimpel is manufactured from a fine gauge metal foil, processed to a rigid specification to ensure the lowest possible coefficient of friction. The foil is lubricated during the manufacturing process and spirally wrapped layer upon layer round a resilient and impregnated plaited core. Long experience has shown the importance of the correct ratio of pitch to size of the wrapping and this is carefully controlled in manufacture.

The construction employed enables the packing to provide an evenly distributed film of lubrication to the shaft.

Metimpel is made in a range of different grades for use particularly with rotary shafts working at high peripheral speeds and at varying temperatures up to and over 540°C (1, 000°F).

Metimpel is recommended for water, oil, mild acids and alkalis, at temperatures up to 140°C (280°F).

Supplied

From 6.5mm to 37.5mm in 1.5mm steps; square section; 6.5mm to 25mm in flat coils, in boxes of 7.75m: above 25mm in 15.25m coils, or longer on request.

Also in sets of cut or die-pressed rings in all sizes.
